

LiftIQ AI — Business Plan

Confidential | July 2026

EXECUTIVE SUMMARY

LiftIQ AI is an AI-powered personal training platform that delivers professional-grade coaching to anyone with a smartphone — without the \$200/hour trainer fee. The platform combines structured strength programming, real-time workout logging, body composition tracking, and AI coaching across web and iOS/Android apps.

The core offer: An AI that writes your training plan, coaches your check-ins, plans your nutrition, and tracks every PR you hit — for \$12.99/month.

Status: Product is built and live. Revenue infrastructure (Stripe) is integrated. Now in go-to-market phase.

Goal (Year 1): 2,000 paying Pro subscribers at \$12.99/month = ~\$311,760 ARR.

1. PROBLEM

Personal training is expensive, inconsistent, and inaccessible.

- A qualified personal trainer costs \$60–\$200 per session
- Most gym-goers either train without a plan or use generic YouTube programs not designed for them
- Tracking progress is manual, fragmented across spreadsheets and notes apps
- Nutrition and recovery advice is siloed from training data — no one product connects them

The result: People go to the gym, work hard, and make slow or no progress because they lack structure, accountability, and feedback.

2. SOLUTION

LiftIQ AI solves all four gaps in one product:

Gap	LiftIQ Feature
No structured plan	AI generates a personalised Push/Pull/Legs, Full Body, or Upper/Lower program in 15 seconds
No progress tracking	Every set logged; strength charts and PR history built automatically
No nutrition guidance	AI writes a 7-day macro-targeted meal plan on demand
No accountability	Weekly AI check-ins analyse training data and write personalised coach feedback
Expensive body comp tracking	DEXA scan PDFs parsed by AI — no manual data entry

3. PRODUCT

Web App

13 pages covering the full training lifecycle: Dashboard, Protocol (training plan), Active Workout, History, Progress charts, DEXA Scans, AI Check-in, Diet, Exercise Library, Recommendations, Pricing, and Docs.

Mobile App (iOS + Android)

Native Expo app with the same core loop — plan, log, review — plus offline support, haptic feedback, and OS share sheet for workout sharing.

Technology Stack

- Frontend: React + Vite (web), Expo React Native (mobile)
- Backend: Node.js/Express REST API
- Database: PostgreSQL
- AI: OpenAI GPT-4o (plan generation, check-in coaching, diet planning, DEXA parsing)
- Payments: Stripe (subscriptions, trials, billing portal)

4. MARKET

Target Customer

Primary: Gym-going adults aged 22–42 who train 3–5 days per week, have tried free programs, and are frustrated by slow progress or lack of structure. They would consider a personal trainer but find it too expensive or inconvenient.

Secondary: Serious fitness enthusiasts who already track training and want AI-enhanced insights (DEXA trends, PR detection, check-in feedback).

Market Size

- ~60 million gym members in the US alone
- Global fitness app market: \$15.96 billion (2023), growing at ~17% CAGR
- AI fitness market specifically: \$8.4 billion projected by 2027
- Serviceable addressable market (serious gym-goers who would pay for an AI coach): estimated 8–12 million people in English-speaking markets

Competition

Competitor	Price	Gap LiftIQ fills
Hevy	Free/\$7	No AI plan generation or coaching
Strong	\$10/mo	No AI, no nutrition, no check-ins
Caliber	\$150+/mo	AI coach but 10x the price, requires human review
Fitbod	\$13/mo	AI exercise selection only, no full plan or nutrition
ChatGPT	\$20/mo	General AI, not purpose-built; no logging or tracking

LiftIQ's position: Purpose-built AI training + tracking + nutrition + body comp in one product, at a price anyone who goes to the gym can justify.

5. REVENUE MODEL

Pricing Tiers

Free — acquisition hook

- Dashboard, 3 sessions/month, limited library (50 exercises), history, progress charts
- Designed to let users experience the value before hitting the wall

Pro — \$12.99/month or ~\$108/year (save 30%)

- Unlimited logging, full library (500+ exercises)
- DEXA scan AI parsing
- AI plan generation (unlimited regenerations)
- AI check-ins and readiness scoring
- AI nutrition protocol
- Arsenal recommendations

7-Day Free Trial on all Pro plans — no credit card required at sign-up.

Revenue Streams

1. Subscription revenue — core recurring revenue (MRR/ARR)
2. Annual plan uplift — annual subscribers pay ~\$9.09/month effective, but pay upfront, improving cash flow
3. Future: B2B / gym partnerships — white-label or referral arrangements with gym chains and DEXA scan providers

6. GO-TO-MARKET STRATEGY

See full Marketing Strategy document. Key pillars:

1. SEO content — "best AI workout plan", "DEXA scan results explained", "Push Pull Legs program" — capture high-intent search traffic
2. Fitness creator partnerships — Instagram/YouTube creators in the natty lifting and physique space
3. Reddit/community — organic presence in r/Fitness, r/bodybuilding, r/leangains
4. Referral program — existing subscribers refer friends for a discount or free month
5. DEXA clinic partnerships — clinics recommend LiftIQ to patients who want to act on their scan results

7. OPERATIONS

Current Team

Solo founder / builder. The product is fully built.

What Scales Without Headcount

- AI features (OpenAI API) — no human labour in the coaching loop
- Billing (Stripe) — self-serve checkout, portal, and webhooks
- Customer support (planned) — AI-assisted FAQ + ticketing

Near-Term Hires (at 500+ subscribers)

- Part-time customer support / community manager
 - Freelance content writer for SEO
-

8. FINANCIAL SUMMARY

See full Sales Forecast document for monthly detail.

Milestone	Target
100 Pro subscribers	Month 3
500 Pro subscribers	Month 7
1,000 Pro subscribers	Month 10
2,000 Pro subscribers	Month 15
Break-even (solo)	~150 subscribers

Unit economics:

- Average Revenue Per User (ARPU): ~\$11.50/month (blended monthly + annual)
- OpenAI cost per active Pro user: ~\$0.80–1.20/month
- Stripe fees: ~2.9% + \$0.30 per transaction
- Gross margin at scale: ~88%

9. RISKS

Risk	Mitigation
OpenAI price increase	Monitor usage, add caching for repeated plan types, explore open-source models
Low free-to-paid conversion	Tighten free tier further, improve upgrade prompts in-app
Large competitor copies the feature set	Speed to market, community moat, DEXA integration differentiation
App Store policy changes (mobile)	Web app is primary; mobile is supplementary
Churn from users hitting plateau	AI check-in feature directly addresses this — make it stickier

10. MILESTONES

Date	Milestone
Q3 2026	Launch publicly, first 50 paid subscribers
Q4 2026	200 paid subscribers, first creator partnership live
Q1 2027	500 paid subscribers, SEO traffic > 5,000 visits/month
Q2 2027	1,000 paid subscribers, referral program launched
Q4 2027	2,000 paid subscribers, explore B2B / gym partnerships
